

Ishant Sehrawat

📍 Bangalore, India | 📞 +91 9306432824 | ✉️ ishantsehrawat75@gmail.com
🌐 [linkedin.com/in/ishantsehrawat](https://www.linkedin.com/in/ishantsehrawat) | 🐙 github.com/ishantsehrawat

Skills

Languages – C++, Python, Go, Java, TypeScript, JavaScript, SQL, PHP, HTML/CSS

Backend & Distributed Systems – Node.js, Express, Kafka, Event-Driven Architecture, Microservices, REST APIs, Elasticsearch, Redis, MongoDB, MySQL, PostgreSQL, Docker, AWS, Kubernetes

Frontend & Web Ops – React, React Native, Next.js, Angular, Redux, System Performance Optimization, Web Vitals, Web accessibility

Observability & Testing – OpenTelemetry, Datadog RUM/APM, CI/CD, React Testing Library (RTL), Jest

Professional Experience

Flipkart, SDE 2

Apr 2026 – Present

- Reduced MTTR to under 24 hours and **cut P0/P1 incidents down to 1/month** by architecting an **AI-powered RCA tool** for automated issue triage, anomaly detection, and production debugging.
- Accelerated release velocity for Big Billion Days 2026 by **cutting build times by 53%** (1h 15m to 35m) via **Rspack/Vite** migration, parallel build execution, and minification strategies.
- Consolidated 7 legacy systems into 1 unified platform, establishing a single source of truth and scaling system operations by implementing fine-grained RBAC approval workflows in **Java and React**.
- Eliminated 10.2M+ annual client errors by reducing hydration inconsistencies by 80% through the **redesign of server-side rendering logic** and client state reconciliation.
- Achieved a **95+ Lighthouse accessibility score** and improved page **LCP by 38%** (3.4s to 2.1s) by engineering WCAG 2.1-compliant components, DOM tree pruning, and asset prefetching.
- Reduced **Kubernetes debugging** overhead and access friction across engineering teams by architecting *Kube-Dash*, a **centralized pod monitoring tool** featuring automated error log parsing and unified cluster access.

Stage, SDE

Aug 2025 – Mar 2026

- Reduced end-to-end media generation **latency by 80%** (30 min to 5–7 min) by designing parallelized inference workloads and distributing execution across **Kafka** powered **event-driven microservices(SSE) in Java**.
- Architected movie-shot rendering engine utilizing topological sort for **graph-based** dependency resolution to enforce deterministic movie scene across **AI generated assets** using **Python** reducing regeneration request by 65%.
- Scaled video streaming reliability for **100K sessions/second** peak concurrently by engineering a custom **HLS playback pipeline** and optimizing buffer management strategies.
- Monitored production reliability for **50M+ daily events** by architecting full-stack observability infrastructure using **Datadog RUM/APM** and RudderStack event-tracking.
- Cut Interaction to Next Paint (INP) by 50% across TV applications by building a **custom virtualized rendering engine** to handle high-density media feeds.

SHL, SDE

Jul 2023 – Aug 2025

- Engineered high-throughput event pipelines for **100M+ monthly events** by extending the **Go-based microservices** architecture with **Kafka** messaging and **OpenTelemetry** instrumentation.
- Scaled scoring throughput to **1M evaluations/hour** during peak hackathon bursts across 32+ assessment suites by **revamping the scoring microservice** architecture to decouple automated and manual evaluation models.
- Cut candidate report generation time by 75% across batch workloads (tested on 120K+ candidate reports) by architecting an **asynchronous, event-driven export pipeline using AWS Lambda, Redis and SQS**.
- Built a real-time evaluator code replay platform supporting 36 programming languages and 5,400 daily evaluations with Monaco editor integration in C++ and live proctoring telemetry.
- Accelerated enterprise customer onboarding by 45% by designing multi-tenant **data migration APIs** that seamlessly transferred **700K+ candidate records** and 5,000+ assessments.
- Accelerated **cross-platform feature delivery** by engineering a unified, accessible UI component library; **elevated code quality** through rigorous peer code reviews and comprehensive unit testing with **React Testing Library (RTL)** and **Jest**.

Education

Bachelor of Technology in Computer Science Engineering, GGSIPU

Aug 2019 – Jun 2023

Percentage: **89.2%**
